Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification recites particular monomers suitable for producing the polymers of the invention. The claims, however, are open to polymers of any monomer makeup. This is seen as an invitation to experiment and the specification does not give one of ordinary skill in the art sufficient guidance to produce applicants invention within the scope of the claims.

Claims 4, 5, 7 and 11-16 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4, 5, 7 and 11-16 have not been further treated on the merits.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by EP '828.

EP '828 discloses core shell polymer particles based on acrylic monomers. These particles are explicitly taught as having linseed oil absorption values overlapping those claimed instantly. It is the position of the examiner that, since these polymers meet the chemical limitations and the size limitations of the rejected claims, they would inherently meet the specific surface area limitation.
